SURAJ S

Java Full Stack Developer | Spring Boot | React.js | Microservices | REST APIs

Bengaluru, Karnataka | +91 7899839183 | surajsm112@gmail.com | linkedin.com/in/suraj-s-45686b190

PROFESSIONAL SUMMARY

Java Full Stack Developer with 3.8+ years of experience designing and delivering scalable enterprise applications using Java, Spring Boot, and React.js for telecom platforms serving global operators including Airtel, Banglalink, PLDT, VIL, and NetOne. Proficient across the stack — Spring Boot, REST APIs, Microservices, Apache Kafka, Redis, and React.js — with a consistent record of measurable impact: reduced API latency by 25%, cut delivery failures by 20%. Regularly engages with business stakeholders and cross-functional teams to translate requirements into technical solutions within Agile/Scrum delivery. Working exposure to Spring Security, OAuth2/JWT, CI/CD (Jenkins, GitHub Actions), Docker, Kubernetes, and AWS.

CORE TECHNICAL SKILLS

Languages & Core Java: Java 8/11/17, OOP, Collections, Multithreading, Concurrency, Exception Handling, Streams

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate

Architecture: Microservices, REST API Design, Event-Driven Architecture, Asynchronous Processing, System Design

Messaging & Caching: Apache Kafka, Redis

Databases: MySQL, SingleStore, SQL Optimization, Query Tuning

Cloud & DevOps: Docker, OpenShift, Kubernetes (basics), AWS (basics), Git, GitLab, Jenkins, GitHub Actions, CI/CD, Maven, Linux

Testing & Monitoring: Apache JMeter, Prometheus, Java Melody, SonarQube, Postman, Swagger

Application Servers: WildFly, JBoss, Apache Tomcat

Frontend Development: React.js, JavaScript, HTML5, CSS3, Responsive Web Development

Security: Spring Security, OAuth2, JWT

Practices & Tools: Agile/Scrum, Jira, Code Reviews, Client & Stakeholder Communication

PROFESSIONAL EXPERIENCE

Software Engineer — 2022 – Present

6D Technologies | Bengaluru, India

- Designed and maintained scalable Spring Boot microservices and React.js front-end components for telecom campaign platforms powering SMS, Email, and WhatsApp messaging across multi-country deployments for operators including Airtel, Banglalink, PLDT, VIL, and NetOne.
- Engaged directly with client stakeholders and business teams to gather requirements, clarify solution design, and ensure delivery aligned with business needs across multiple telecom operator engagements.
- Reduced API response latency by 25% by designing and implementing Redis-based caching strategies across high-traffic services.
- Built Kafka-based asynchronous processing modules to decouple services and improve scalability under high-TPS load (500K+ messages/day across deployments).
- Diagnosed and resolved production incidents through root cause analysis (RCA), improving service stability.
- Led performance testing using Apache JMeter and drove code quality via SonarQube analysis and structured peer reviews.
- Partnered with Product, QA, and DevOps teams in Agile/Scrum ceremonies to consistently deliver features on schedule.

Web Developer Intern — 2021

Hoch Tech Solutions

- Developed a full-stack shopping cart web application using HTML, CSS, MySQL, and Apache Tomcat, and supported deployment and debugging activities across development environments.

KEY PROJECTS

High-Performance Email Delivery System

- Designed scalable backend services to support high-TPS email delivery for telecom campaign platforms.
- Implemented Kafka-based asynchronous communication to decouple delivery pipelines from upstream triggers.
- Reduced delivery failures by 20% through improved retry logic and structured error handling.

Quota Refund Module

- Built reusable, modular refund-processing components adopted across multiple service lines; automated refund scheduling and inter-service communication to reduce manual intervention.

Telecom Campaign Platforms (Airtel, Banglalink, PLDT, VIL, NetOne)

- Built and optimized backend REST APIs supporting multi-channel campaign delivery for global telecom operators.
- Implemented Redis caching and performance tuning to support high-concurrency workloads.
- Supported production deployments and monitoring, ensuring platform reliability at scale.

EDUCATION

Bachelor of Engineering (BE), Computer Science — ATME College of Engineering 2022

Diploma — JSS Polytechnic 2019
